

API Architecture

Purpose: The purpose of this document is to explain the architecture of the project explaining how it used, what it is used for.

Architecture Explanation:

Project follows MVC Architecture. The project has three models: User, Workout, Goal. This is for the database. The relationship consists of the User model having a one-to-many relationship to both Workout and Goal models. The view is the front end which can connect through the controllers allowing, for ways to connect to the database and using authorization for connections. With CRUD operations on the database and returning the appropriate responses.
